

Our Science topic in year 3 is Forces and Magnets. We have been learning all about different forces and how they occur. We have also been exploring different magnets and the different metals that are attracted to a magnet.

The children explored friction on different surfaces. We created an investigation into different surfaces and whether the material of the surface would cause more or less friction.

The children explored magnetic materials in a scrap yard challenge.

The children investigated the strength of different types of magnets. The aim was to find out how strong the magnetic field was for each magnet by creating a paperclip chain.
