

## Year 1 Science

In science this term, we started off by learning about what herbivores, carnivores and omnivores are. We had fun matching the animals to their diet.

We investigated animal droppings to find out more about their diet. This was gross!

We also learnt about variations in humans and animals. We looked at each other's eye colours and made a live pictogram.

We also took part in a butterfly hunt to investigate camouflage. We caught the bright coloured butterflies first as they stood out more. The camouflaged butterflies were trickier to find.

When we got back to class, we made our own camouflaged butterflies for the other children in our classroom to find. Can you spot our camouflaged butterflies in the pictures below?
