

Topic – Blood Heart

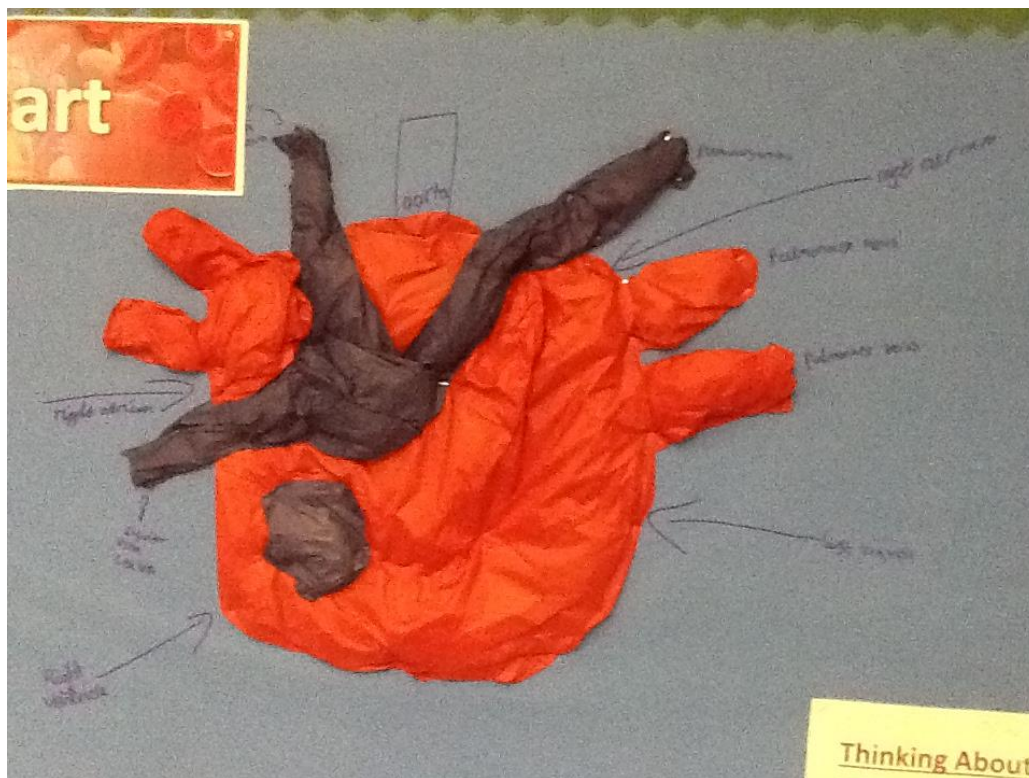

Year 6 had a visitor from William Edwards come in and perform a dissection of a heart in their classroom. They were allowed to touch it through a glove – if they wanted to!

Year 6 learned about the different components in blood.

They also looked in detail at the different parts of the heart and how they work together to ensure oxygenated blood gets to all the different parts of the body.

Finally they created a piece of writing to show everything they knew about the Circulatory system and shared this with some of their families.
