

In Year 3, the children have been exploring *light and dark*. They have been investigating the effectiveness of different light sources and which materials are better at blocking light. We have also been learning about the importance of sun safety and how to keep safe in the sun.

Here is a picture of a **Sun Safety** poster made by a Year 3 child. On it, we explained the importance of staying safe whilst out in the sun.

Here is a picture of our Science display in Year 3.

Here is a picture of the children as they explored mirrors and reflections. The children held a mirror above their head and had to look into the mirror as they attempted to walk along wobbly lines. It was very tricky as the children were not allowed to look down at the floor and could only look at the reflection of each line in the mirror.

We investigated different materials to see if they were opaque, translucent or transparent. We wanted to see which material would block out the light best.
