

Year 2 Materials

This half term in year 2 we are learning about materials and their uses. We compared and contrasted different materials and named what they are made from.

At the beginning of our topic we came up with some questions we want to answer throughout our science lessons.

During this lesson, we discussed what various items we use every day (pencil, glue, rubber, pen, and scissors) were made from. We also discussed what they felt like. Many children noticed that scissors were made from both plastic and metal.
