

Class RC Topic – Changing materials

We have been busy being super scientists and carrying out experiments with test tubes and pipettes.

Skittles experiment

Children observed what changes happen when we added water to Skittles. They then recorded what happened by doing observational drawings and talking to their friends.

“The colours have come off and they are melting”

Ice gardens

We have been busy making ice gardens, in which we looked at the similarities and differences of flowers. We talked about their colour, size and shape. Children talked about what happened as they added flowers and other natural interesting objects and if they floated or sank. Children observed and talked about what happened as they melted,

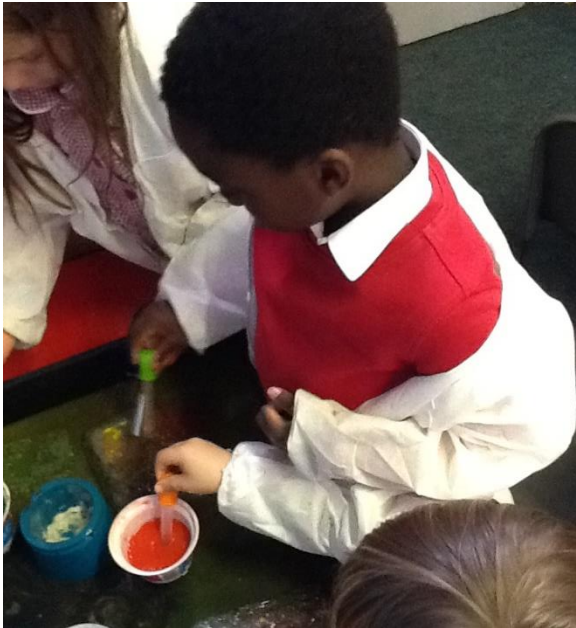

Ice and Salt

We have also been looking at ice and what happens when we added salt. We used coloured water to see the different patterns and textures that formed.

The children observed and talked what they could see and about what happened when you added salt to one part of the ice and not to other parts .

"Its melting and made a hole"

"It's melting faster.
"It's breaking, it's gone"

"You can see all the cracks this one is bigger"
