

Class RRD - Topic-changing materials

Using their senses, the children explored the ice chips and described their observations using a range of vocabulary. Then they added different coloured paint to the ice chips and put them back in the freezer.

Look what happened to our ice chips!

The ice is melting.

Some ice feels hard and some is mushy!

The ice is changing colour!

The green ice is the grass and the red and brown ones are the red-hot lava!

The blue ones look like the sea because they are watery.
